

Theobald Xtract IS

[Extract mass data

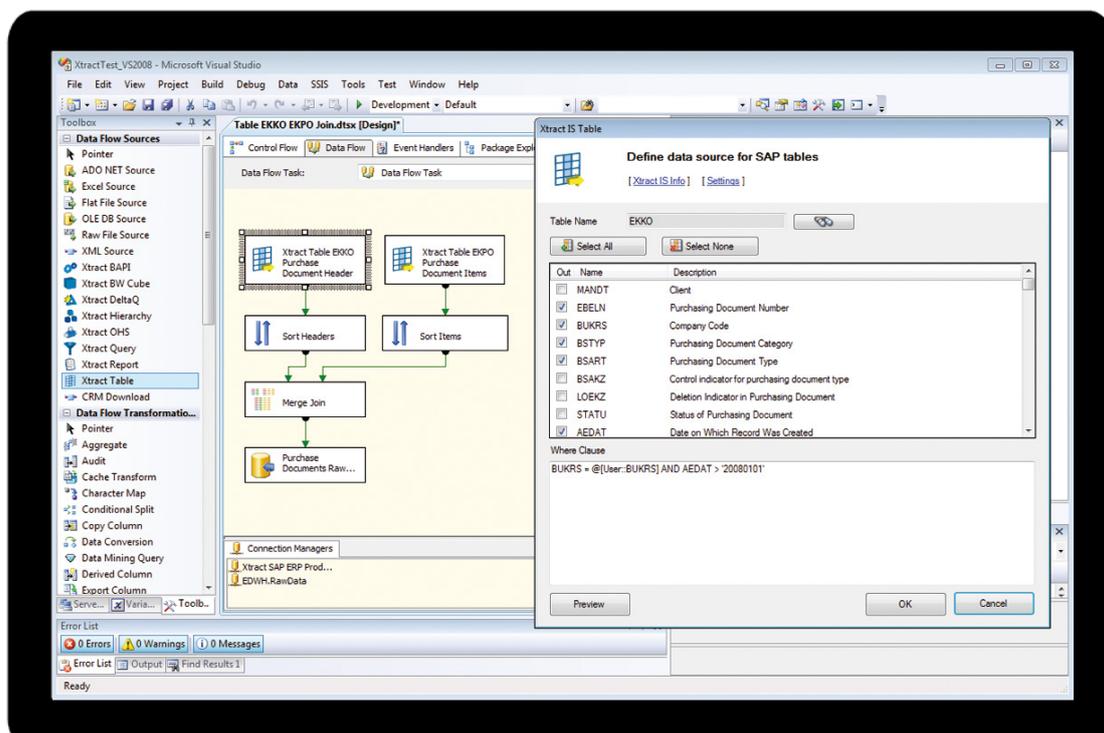

[Extract mass data quickly and efficiently

Theobald Xtract IS guarantees a seamless integration of your SAP R/3 or SAP BW system into the antares BI landscape.

In just a few clicks, you can extract your company's mass data with a high degree of performance and stability, even from a multitude of different SAP sources. This data can then be automatically loaded into one or more targets. With Xtract IS, your data extract gains significant speed compared to non-native interfaces.

As a standard tool, Microsoft SQL Server Integration Services (SSIS) covers the entire ETL process with high performance and ease of use. Model your data flows in a data type-safe manner, with full metadata support and a graphical editor. By using Xtract IS for data extraction from SAP for further use in SQL Integration Services, you create optimal conditions for convenient and intuitive BI applications.

The portfolio of nine different Xtract IS modules for SQL Server Integration Services ensures coverage of the complete range of data extraction from SAP.

- With Xtract Table, mass data can be extracted quickly and reliably. Any statements can be used to restrict the data as required. Dynamic SQL statements are supported with the inclusion of SSIS variables. Furthermore, it is possible to link (join) and aggregate tables.

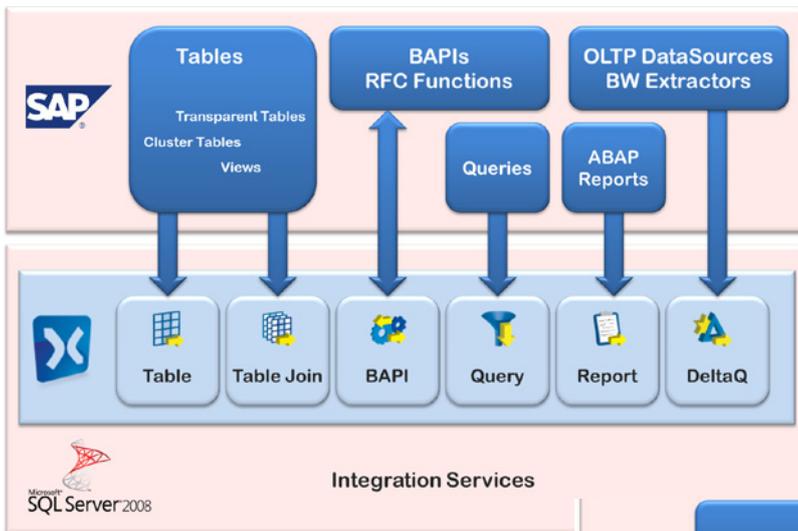

[Performance and stability

Seamless and efficient extraction of mass data? Theobald Xtract IS makes it possible!

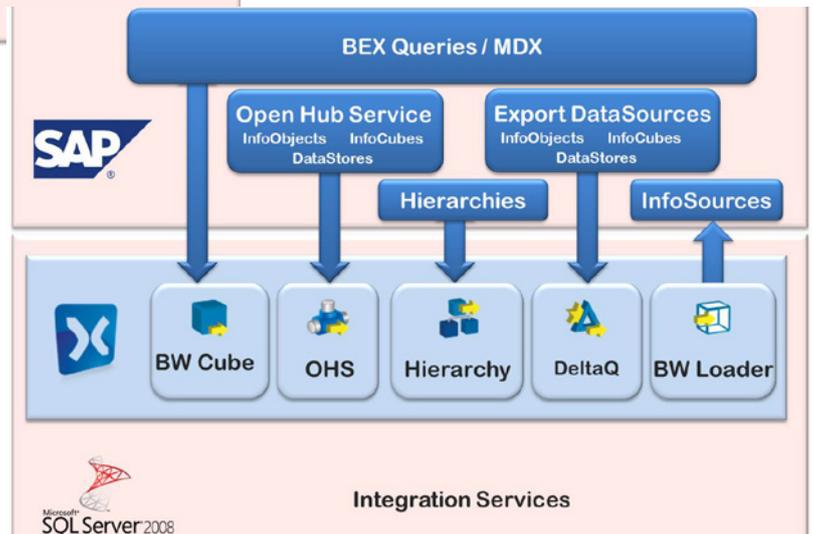

Our partner Theobald Software GmbH looks back on more than 10 years of experience in the design and development of SAP interfaces.

As an SAP certified partner as well as Microsoft Gold Certified Partner, Theobald Software GmbH offers a wide range of standard products and individually designed services for the seamless connection of Microsoft products and SAP solutions.

Extraction from SAP ERP or SAP R/3

Extraction from SAP BW or SAP BI

[Your benefits with Theobald Xtract IS

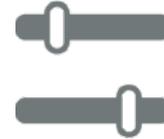

Based on SAP-certified technology.

Installation and configuration in no time at all.

Works with and independently of other modules.

Seamless integration in both directions.

Time saving through direct access.

Business logic at your service.

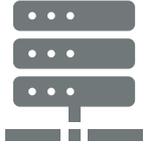

Robust, standardised process for incremental loads (delta logic).

Cost-saving due to optimum integration without downtime.

[Gain added value with Theobald Xtract IS

Integretet

The functionalities of Xtract IS guarantee a seamless integration of your ERP or SAP BW system into our BI landscape.

Flexible

The portfolio of nine different Xtract IS building blocks for SQL Server Integration Services (SSIS) ensures that the complete range of data extraction from SAP is covered.

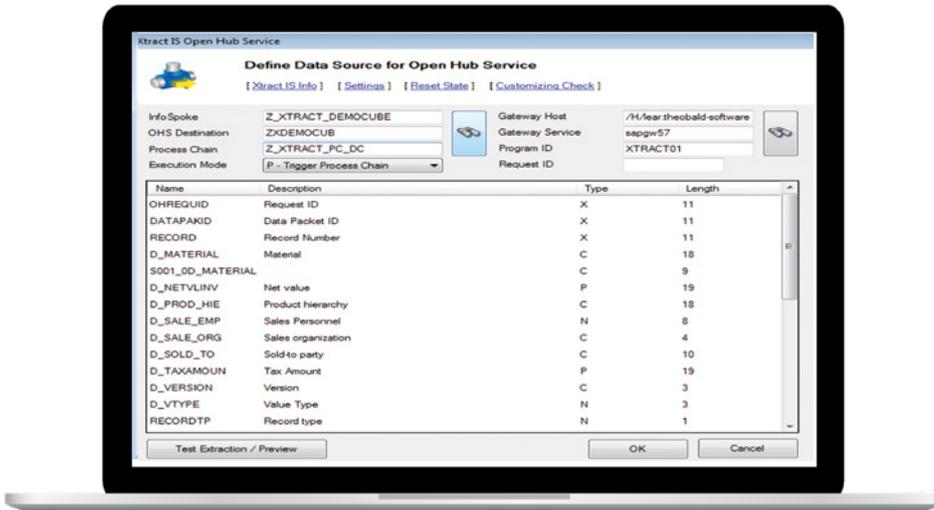

Effective

Plug & play with SAP and the SSIS. With just a few mouse clicks, you extract mass data with maximum performance and stability. Data extract „at full speed“.

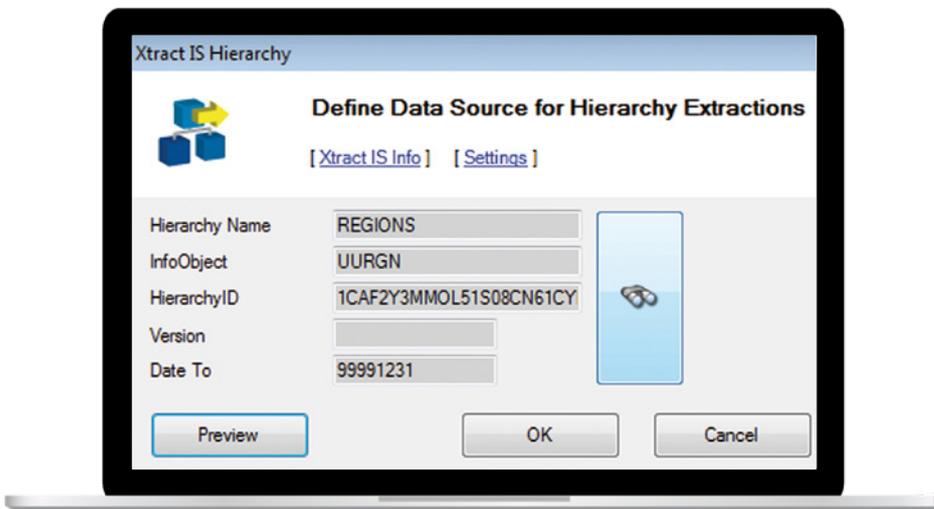

[Consistent extraction method

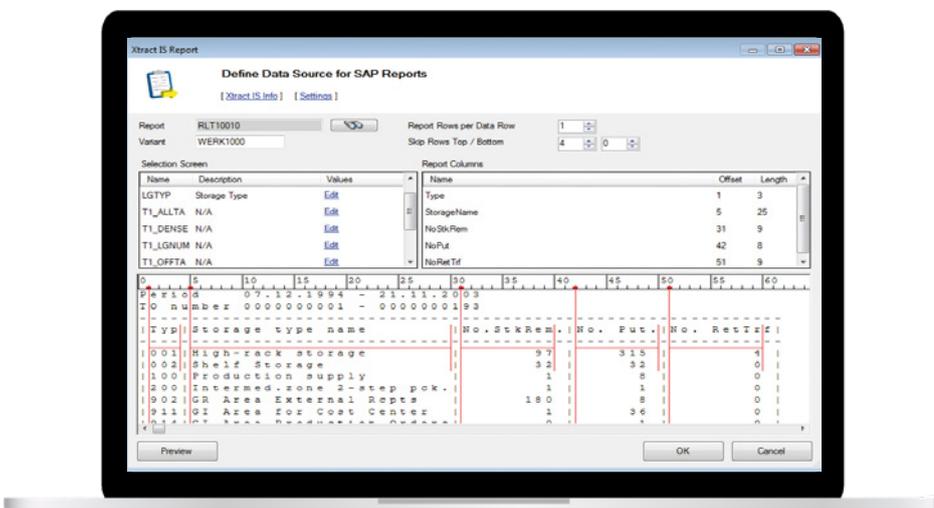

- With Open Hub Services, SAP provides an integrated extraction method for cubes, info objects, ODS objects, etc. as of BW release 3.5. Xtract OHS supports all OHS processes up to delta extraction for incremental data import.

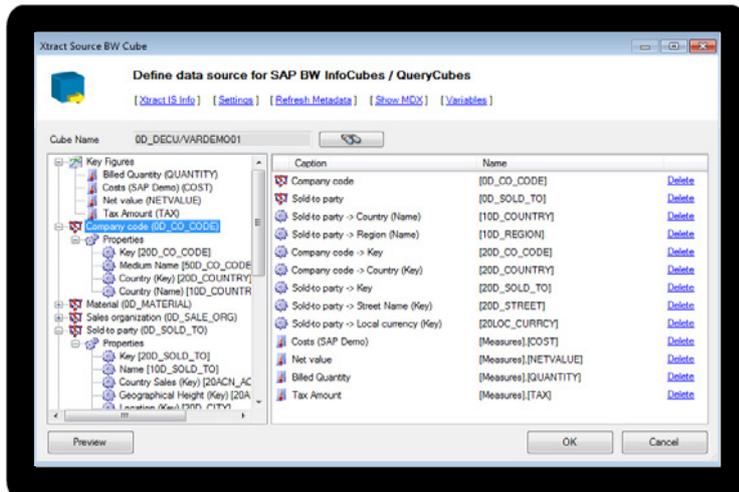

- Xtract Hierarchy extracts hierarchies from SAP BW/BI. On request, the description texts can also be added to the hierarchy nodes.

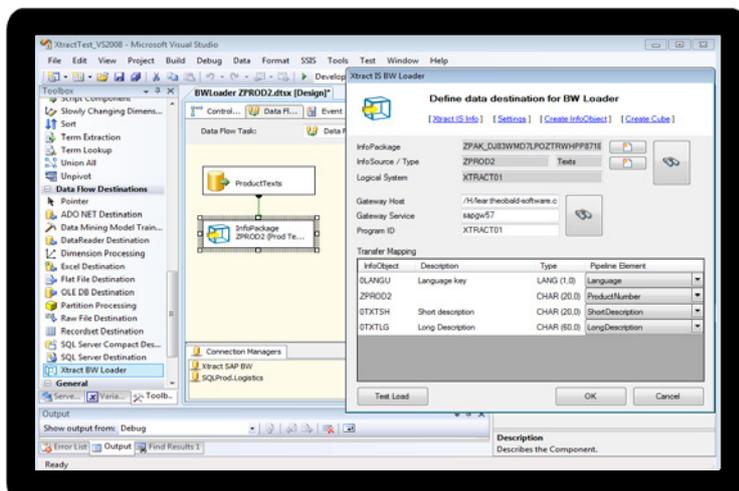

- With Xtract Report, existing ABAP reports can be used as a data source. The data can be flexibly selected and made available for the SSIS data flow.

[Dynamization through SSIS variables

- Attributes and key figures are extracted from BW cubes and BEx queries via drag & drop. This turns complex, multidimensional data structures into relational data that is easy to handle. Dynamization takes place via query variables. A packaging function is available for handling large amounts of data.

- With Xtract BW Loader, you integrate data from other data sources into your SAP BW - directly in the SSIS wizard. The corresponding BW Info Package is automatically triggered and filled.

[2,100 customers worldwide - A strong basis

„The use of Xtract IS for data extraction from SAP for further use in the SQL Integration Services and the antares BI software has brought us several advantages: The data extract runs significantly faster than via previously used interface. As a result, the data is available to the users as early as 5 am. Previously, it was between 10 am and 12 noon.

By using the DeltaQ component, we were able to significantly reduce the time of data retrieval for the order backlog cube. The ability to retrieve SAP queries with variants from an SSIS package allows us to control queries already in use centrally via antares and to distribute the results to the respective employees. Due to the close cooperation with antares we have always found a solution quickly, even for difficult problems."

[Introducing ourselves

What we do

We are a medium-sized, independent company specializing in professional software. Since our foundation in 1994 we have been developing and marketing strategic information systems.

Many years of expertise in the areas of analysis, planning and corporate management as well as governance, risk and compliance are guarantors for the development and expansion of the advanced antares software solutions.

Who we are

State-of-the-art technology, innovation and user-optimized solutions characterize our products. Passion, reliability and professionalism are the guidelines in dealing with our customers and partners. Competent and reliable support is our top priority. To ensure this, we work consistently on the further development of our established software solutions, provide professional project management and also offer comprehensive services - from training and webinars to coaching.

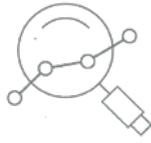

What we offer

We now count more than 300 companies of all industries and sizes among our customers, including well-known companies from the industrial, retail and service sectors. They all benefit from an experienced BI company with flat hierarchies, professional partnership and customer proximity.

What is our goal

Our goal is to provide our customers with a secure, user-friendly information base so that informed and confident decisions can be made.

[30 years of experience in the development of business Intelligence software solutions

Analyze. Plan. Control.

Integrate your data and make knowledge work for you. Gain important insights to make confident and profound decisions.

Governance. Risk. Compliance.

With our holistic risk and opportunity management software, you systematically identify, analyze, assess, monitor and control risks to seize business opportunities.

Individual BI software

We've been implementing BI software solutions for 30 years, helping you make better decisions across your business. Perfectly tailored to your needs and processes.

Software consulting

We offer a comprehensive portfolio of services, ranging from the compilation of your software requirements, implementation and accompanying user training to maintenance after completion of the project.
