

## antares analyzer

[ Software solution for analysis and reporting

## [ Planning, analysis and control made easy

With the increasing digitization of processes and workflows in companies, the volumes of data that are generated and processed are growing steadily. Companies have to analyze this data and derive strategies from the insights gained in order to optimize business processes and gain a competitive advantage. But which of your data is usable at all and which quality is available? Find it out and avoid an incomplete or even incorrect view.

Don't rely on common standard solutions to analyse your data. Our analysis and reporting software antares analyzer allows you to analyze, compare and contrast your data as you see fit as well as to visualize the results as reports.

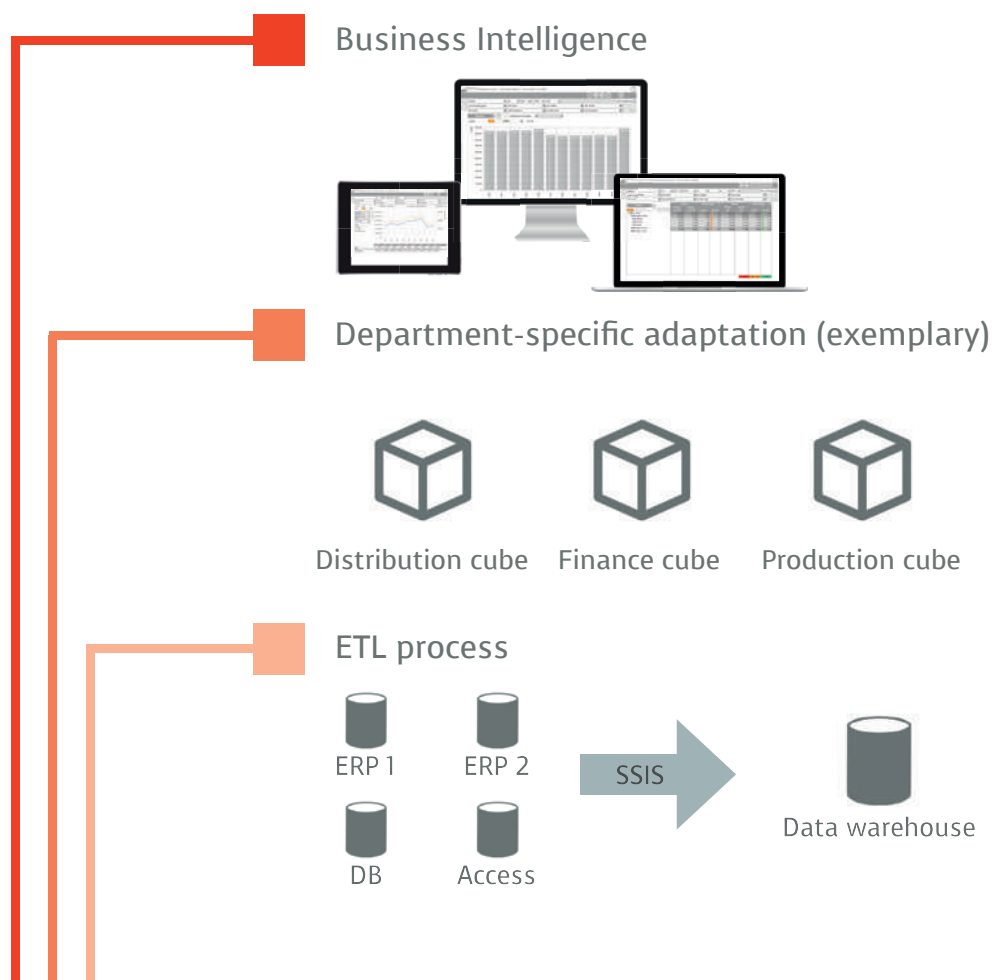

The foundation is a data warehouse combined with modern OLAP technology. The intuitive web interface ensures worldwide access to a uniform database.

The software solution guarantees fast access to information that is straightforward to handle, quick to retrieve and helps you monitor your processes.

Pre-configured reports supplemented by the ability to perform ad-hoc analyses in seconds enables you to visualise your information in aggregate and detailed form.

After an implementation in just a few days, all users have access to relevant information on the basis of a uniform interface - as needed and at the click of a mouse.

## [ Customized Business Intelligence

## [ antares analyzer functions

- Easy operation thanks to the intuitive interface structure and modern web-based design. Self-explanatory cockpit views and graphics facilitate daily handling and ensure fast results.
- Reports can be compiled by the user. The dimensions are freely selectable and can be variably combined with each other. The user determines which cube contents should be displayed in the report.
- Visualization of the information is possible in both aggregated and detailed form.
- Data anomalies, the framework conditions of which are defined in advance, can be noticed via push notification, accessed immediately via fast access and visualized by means of reporting.
- With the help of the analysis, success potentials and perspectives for the company can be identified and a positive development can be driven forward. Detect deviations in planning at an early stage and intervene efficiently.
- The bundling and intelligent control of the data flow takes place in the central data warehouse, combined with modern OLAP technology. All components used undergo regular quality control.

Data analysis and reporting

Ready for use in just a few days

## [ Company key figures at a click

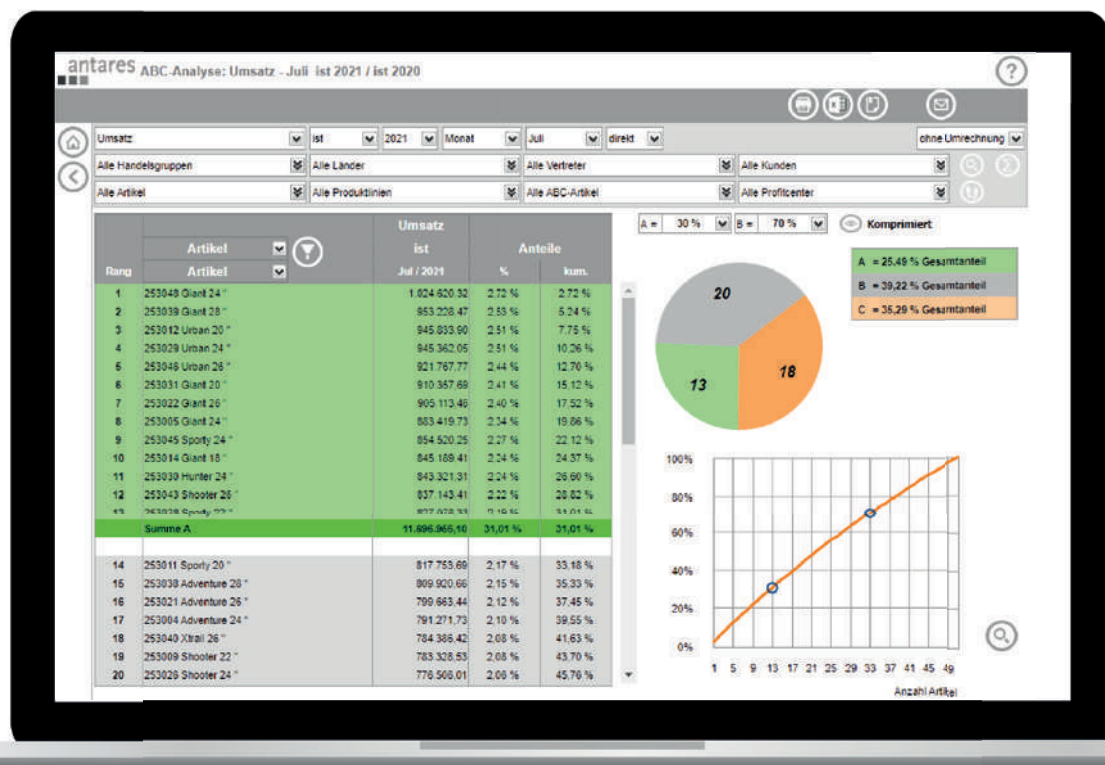

Decision-makers need information that meets their needs in a wide variety of resolutions. The presentation must meet the requirements of different questions in the company, whether as a graphical overview or in detail in tabular form. This places high requirements on the flexibility of the data analysis.

antares analyzer combines consequent innovation with the experience of numerous projects with well-known customers of all industries and company sizes.

The advantage for you as a user: A high degree of variability with regard to the structure and design of your evaluations.

ABC analysis is just as much a part of the repertoire of standard analyses as the presentation of seasonal fluctuations. Key figures can be compared at the push of a button and their development over a freely definable time period can be viewed.

Traffic light functions in almost all reports enable a quick and concise variance analysis of selected key figures. Supported by different scenarios, planned/actual comparisons can be carried out in all reports.

- Within the „Favorites" view you can save personal settings for desired information in the standard reports, share them with other users or use them for your report portfolio. This allows you to optimize the navigation in antares analyzer to your requirements.

## [ Modular expandable

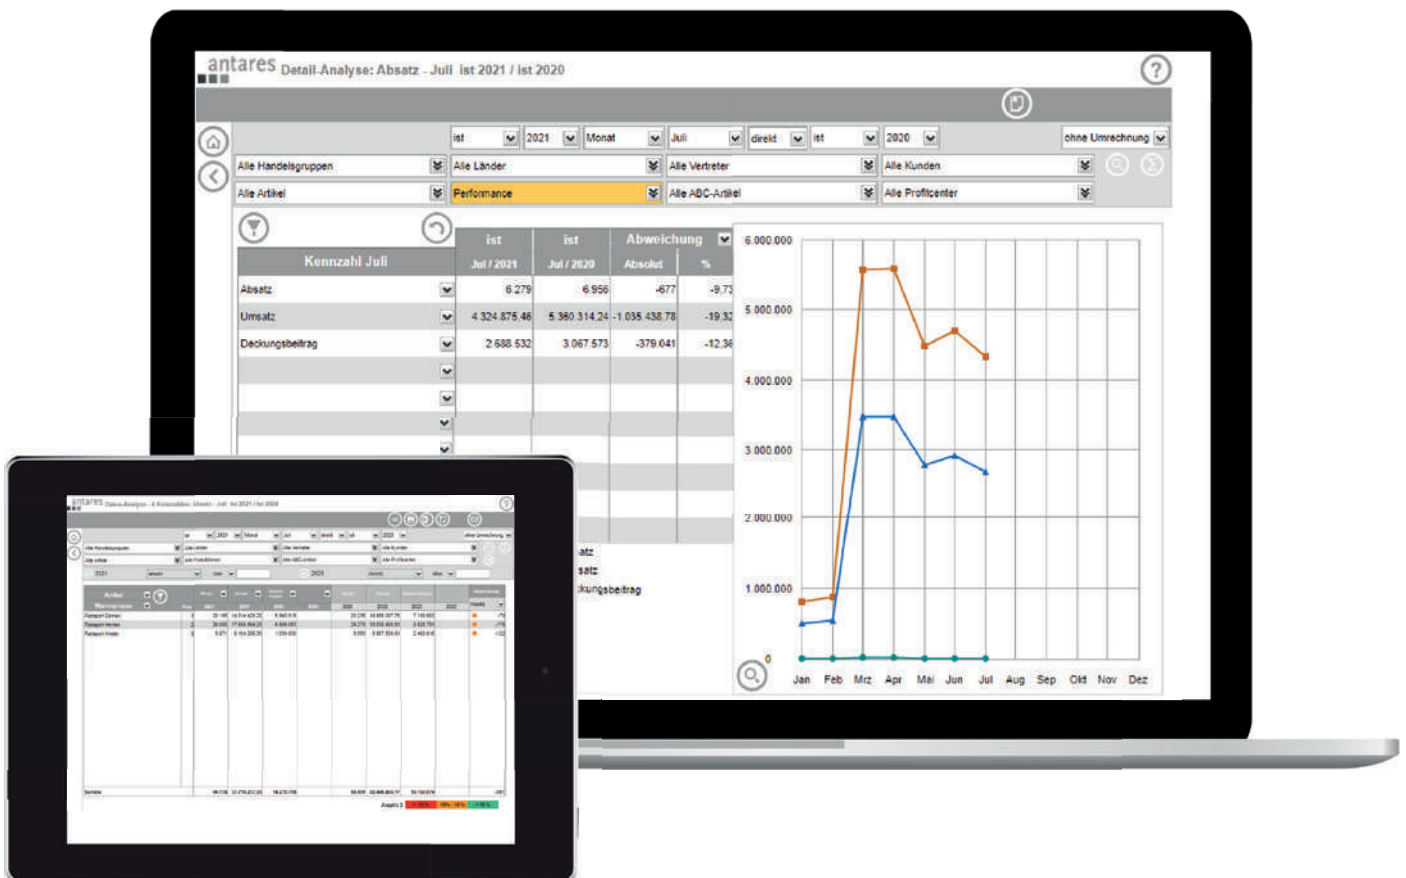

The add-on module antares analyzer spotlight gives you the possibility to analyze all data from the cube in any representation via pivot functions.

The operation is intuitive and meets all requirements for flexible ad hoc reporting. You compile your reports yourself - the dimensions are freely selectable and can be variably combined with each other. Thus, you as the user determine which cube contents you want to display in your ad hoc reporting.

Analyses can be saved at any time and/or made available to other users by e-mail.

The bundling and intelligent control of the data flow takes place in the central data warehouse. All company-relevant data is stored there.

The analysis and reporting software antares analyzer determines the most important key figures as well as information within seconds and thus creates clarity. Use this knowledge advantage as a clear benefit - at any place, at any time.

- Our additional module „Performance monitor“ supports you in analyzing your company's key figures. The key figure development over time, the deviation of the key figure from your defined target as well as the development in the basic data provide you with the necessary information. If required, this is displayed via multi-level organizational and company structures.

## [ Gain added value with antares analyzer

### Extensive

A management information system based on intelligent data bundling and control. The software offers comprehensive, meaningful reporting with a wide range of selection and analysis options.

### Fast

The implementation, fully automated data retrieval and realization of your individual requirements takes only a few days.

### Individual

Individually compilable analyses, reports and cockpit displays. In addition to the standardized data transfer, an individual design is made possible.

### Modern

The solution is 100% web-based (HTML5), relies on future-proof database technology and is easily integrated into your existing IT environment. All components used undergo regular quality control.

### User-friendly

Easy operation is provided by the intuitive interface structure and the modern, web-based design. Self-explanatory cockpit displays and graphics facilitate daily handling and ensure fast results.

### Independent

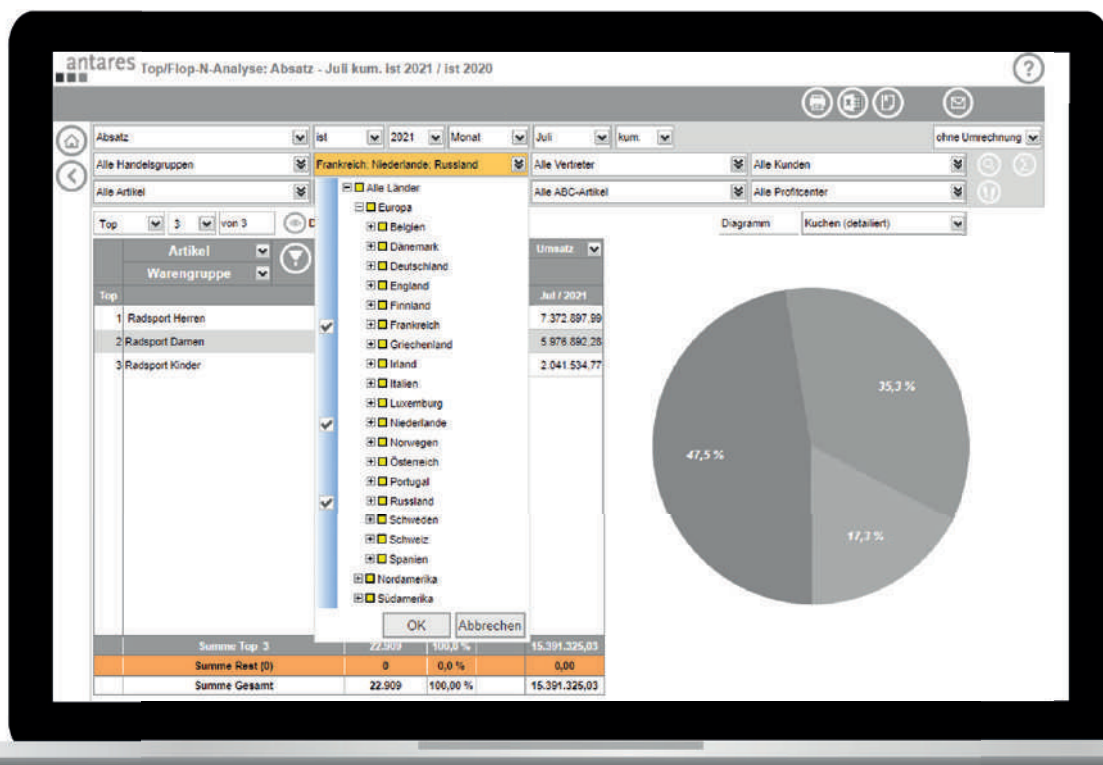

Thanks to the web-based technology, all users access all data regardless of their location and time. The BI software can be used for any size of company and any sector of industry.

## [ Focus on the essentials

The answer to the question about the products with the highest volume or sales is provided by the top n evaluation as standard. The price-mix analysis is used to evaluate the causes of a sales variance, enabling you to identify whether this variance is due to a change in quantity, a change in price, or a change in both factors.

The integrated map from Google Maps visualizes in which region positive or negative developments are taking place. This information enables the management to react to market changes at short notice and thus ensure the company's success.

The quantity variance is intended to illustrate the isolated effect of changes in quantity on revenue. The price variance shows the extent to which revenue changes are attributable to variances in the underlying prices. No direct quantity or price changes can be attributed to the mix.

- A freely selectable number of the best-selling articles is displayed at the monthly level. The selection of the key figure to be evaluated (sales, turnover, etc.) as well as the definition of the desired dimension and hierarchy level (article, product group, etc.) is done via user-friendly drop-down menus.

## [ Our success story: Saint-Gobain Weber – Profit variance analysis made easy

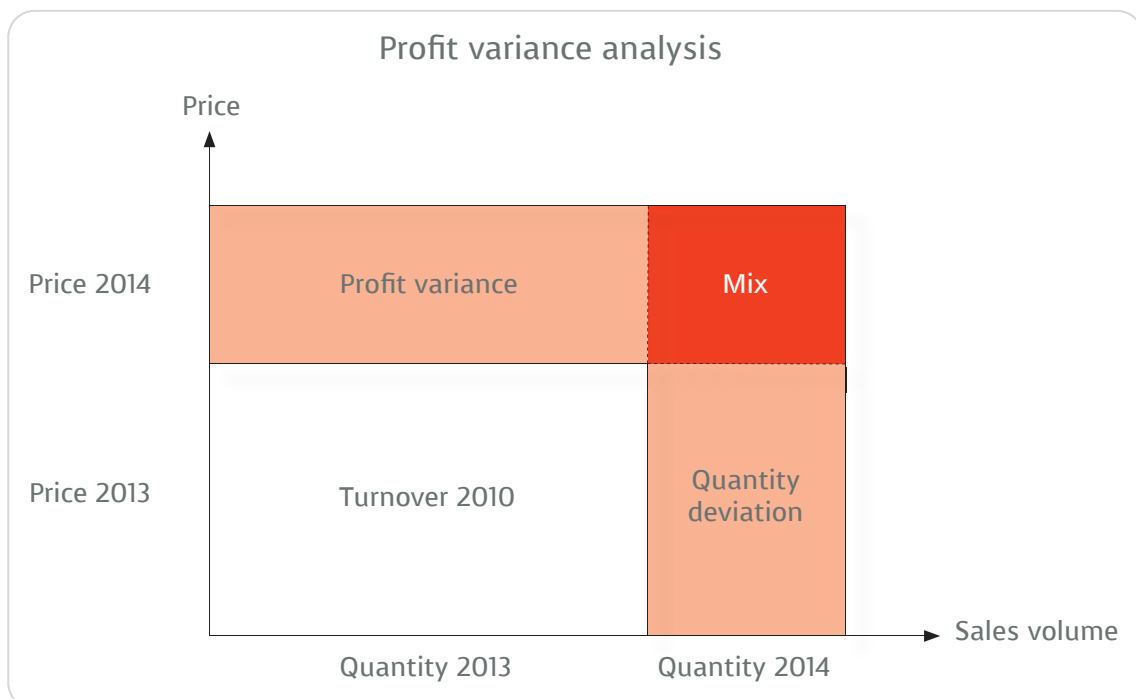

### Task

The goal is to reduce the dependence on cyclical markets and the influence of economic fluctuations. To achieve this, management and all other company departments need a flexible software for quantitative analyses of percentage price increases. The company is also investigating which influencing factors are responsible for the deviations. The focus is on whether the deviations are within the company's sphere of influence and whether they can be corrected quickly through changes in the product portfolio.

### Solution

antares analyzer, which has been in use at Saint-Gobain Weber for years, was the ideal basis for a flexible and customized result variance analysis.

In cooperation with the company, we developed a universally applicable solution, which is available to the different company divisions (sales, purchasing, production, cost accounting, warehouse). The extension was implemented with the support of the antares BI specialists within a few days with a seamless data transfer from the existing ERP system.

## [ What our customers say

„We are now able to perform ad hoc analyses based on daily updated detailed data from SAP at any time.“

„The simple data integration ensured a seamless implementation of the aforementioned requirements. The IT department was impressed by the simple connection to the existing system landscape. The data is now transmitted smoothly every night using the Xtract-IS interface.“

Andreas Copperrath  
CEO

Copperrath Feingebäck GmbH

## [ Our satisfied customers

# [ Introducing ourselves

## What we do

We are a medium-sized, independent company specializing in professional software. Since our foundation in 1994 we have been developing and marketing strategic information systems.

Many years of expertise in the areas of analysis, planning and corporate management as well as governance, risk and compliance are guarantors for the development and expansion of the advanced antares software solutions.

## Who we are

State-of-the-art technology, innovation and user-optimized solutions characterize our products. Passion, reliability and professionalism are the guidelines in dealing with our customers and partners. Competent and reliable support is our top priority. To ensure this, we work consistently on the further development of our established software solutions, provide professional project management and also offer comprehensive services - from training and webinars to coaching.

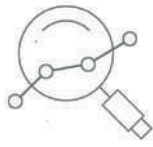

## What we offer

We now count more than 300 companies of all industries and sizes among our customers, including well-known companies from the industrial, retail and service sectors. They all benefit from an experienced BI company with flat hierarchies, professional partnership and customer proximity.

## What is our goal

Our goal is to provide our customers with a secure, user-friendly information base so that informed and confident decisions can be made.

# [ Over 25 years of experience in the development of business Intelligence software solutions

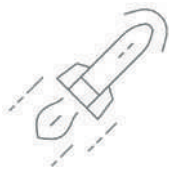

## Analyze. Plan. Control.

Integrate your data and make knowledge work for you. Gain important insights to make confident and profound decisions.

## Governance. Risk. Compliance.

With our holistic risk and opportunity management software, you systematically identify, analyze, assess, monitor and control risks to seize business opportunities.

## Individual BI software

We've been implementing BI software solutions for over 25 years, helping you make better decisions across your business. Perfectly tailored to your needs and processes.

## Software consulting

We offer a comprehensive portfolio of services, ranging from the compilation of your software requirements, implementation and accompanying user training to maintenance after completion of the project.
