[Flexible BI and planning on all common data sources and one platform

[Flexible BI and planning on all common data sources and one platform

For over 25 years, our software have used leading Longview (formerly arcplan Enterprise) technology to get the most out of our BI software solutions for our customers.

This forms the basis for technologically advanced, modern and successful product development.

The web-based Longview development platform is extremely flexible. It combines the benefits of an individual solution with the rapid availability of standard applications.

With Longview, information from various data sources is pooled with heterogeneous content in the company. Additional BI tools can be quickly and easily added.

The Longview development platform is particularly characterised by its ease of use and fast application development. Based on this, we are able to implement turnkey products tailored to your specific requirements.

Data integration with Microsoft SQL Server SSIS works absolutely smoothly and makes it possible to significantly improve data quality.

Longview is optimal for rapid deployment of analytical applications. Thanks to the large number of pre-built functions that follow a simple syntax, unlimited complex process logics can be implemented. By simply dragging arrows, Longview automatically generates statements in the relevant database language.

Use of various data sources

[The Longview architecture

Longview software enables the deployment of business intelligence, analytics and planning applications that fully meet your needs. Our comprehensive approach to data connectivity allows immediate access to more than 20 data sources.

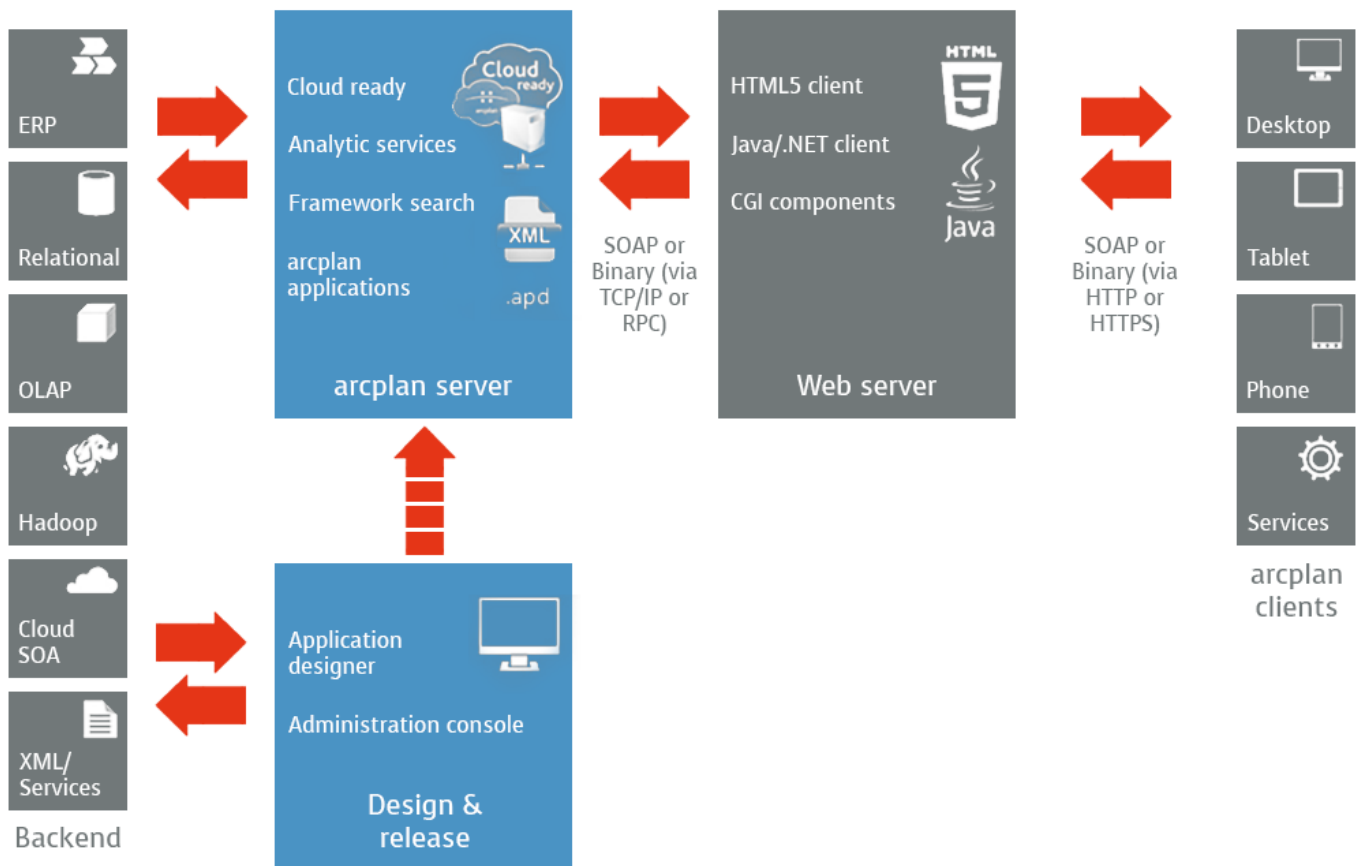

[Longview development platform - more than just reporting

Longview provides real-time, interactive analytics that go far beyond simple reports and dashboards. It gives executives at all levels decision-relevant, goal-oriented information and enables intelligent monitoring as well as control of corporate activities.

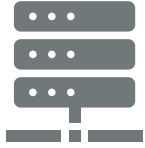

There is no need to implement cost-intensive data warehouses. Since a Longview-based BI solution can be quickly adapted to changing business processes, maintenance costs remain low over the entire lifecycle of the application.

Longview's comprehensive approach integrates and analyzes data from a wide variety of sources, including ERP systems, OLAP, relational databases, and web services - simultaneously and in real time. As a result, analyses and reports are available faster and more comprehensively.

- Scalable analytics often require an architecture to simultaneously analyze a variety of data sources so that the right users get the right analytics at the right time. Longview's three-layer architecture ensures successful implementations even in highly complex IT environments.
- Longview's open architecture enables content-rich applications with professional visualization as well as integration of third-party content and interactive drill-down functionality into internal and external data sources (so-called mash-ups).

[Gain added value with our BI tools

Integrated

The use of Longview typically does not require data extraction or aggregation of content in a proprietary data store, but allows direct connection to a variety of relational and multidimensional data sources from vendors such as SAP, Oracle, IBM, Microsoft, Teradata, and more.

Flexible

Longview's web-based development platform is extremely flexible, combining the advantages of a customized solution with the rapid availability of standard applications.

Effective

The high-performance development environment enables companies to build customized applications quickly and easily. Comprehensive, advanced functionalities reduce the dependency of business departments on different vendors and enable the development of holistic applications.

- Longview's flexibility integrates a variety of reports and analyses into one cohesive, user-focused application. Decision makers can also print out reports in a variety of formats.
- Longview accesses more data sources than any other BI tool and enables the integration of data from different sources in a table, a report or an application - just by dragging & dropping and without prior data preparation - with full WYSIWYG functionality.

[Components of Longview Analytics

Longview Application Server

The Windows or Unix server provides users with consistent, uniform analyses via web and in real time. It is available as a 32-bit and 64-bit installation.

Interfaces/Data sources

Whether ERP, OLAP or relational databases, a comprehensive selection of standardised interfaces guarantee access to virtually every data source.

Web Services/SOA

Fully SOA-integrated, Longview 2017 Analytics (formerly arcplan Enterprise) offers comprehensive web-service support for every thinkable analysis.

Longview Application Designer

The high-performance development environment enables companies to quickly and easily build custom applications – without any programming effort – using drag & drop. In this way, graphics, tables, diagrams and text can be combined as desired and presented in the user's chosen style.

Administration Console

The Administration Console is designed for publishing, managing and expanding the developed applications and for administration of the Longview server.

With the help of state-of-the-art Longview analysis technology – [self-service analytics](#) – individual evaluations can be easily and flexibly compiled, while ad-hoc queries and self-service analyses can be carried out from multiple data sources. The application is so easy to use thanks to the intuitive interface that no user training is required.

[The suitable server technology – Microsoft SQL Server

As a long-term, certified Microsoft partner, we offer optimum server technology combined with Longview components and our solution modules based on Longview technology.

The integrated, scalable data warehouse platform also offers stable, high-performance management in the event of a high data and user quantity. The ETL features of the Microsoft SQL Server Integration Services (SSIS) are utilised to create and manage your company-specific data warehouse.

Microsoft Partner

[Customized solution with fast availability

Secure, scalable architecture. Applications are scalable across the enterprise.

Innovative analytics. Support for in-process analysis as well as in-memory analysis for complex calculations.

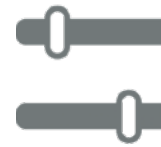

Fast implementation. The Longview solutions are available after only a few weeks.

Low investment in infrastructure of different platforms facilitates the integration into your existing IT environment.

Maximum flexibility. Graphically sophisticated, personalized solutions for selected user groups.

Open approach and interoperability. Integration of SOA objects as information source and for information provision for mashups.

Low TCO. A tool for a wide range of applications and fields of use.

Independence from the IT department thanks to an intuitive interface and enhanced visualisation options

Access to relevant data in real time and browser-based ad-hoc analyses

Intuitive and fast report creation

[Introducing ourselves

What we do

We are a medium-sized, independent company specializing in professional software. Since our foundation in 1994 we have been developing and marketing strategic information systems.

Many years of expertise in the areas of analysis, planning and corporate management as well as governance, risk and compliance are guarantors for the development and expansion of the advanced antares software solutions.

Who we are

State-of-the-art technology, innovation and user-optimized solutions characterize our products. Passion, reliability and professionalism are the guidelines in dealing with our customers and partners. Competent and reliable support is our top priority. To ensure this, we work consistently on the further development of our established software solutions, provide professional project management and also offer comprehensive services - from training and webinars to coaching.

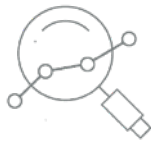

What we offer

We now count more than 300 companies of all industries and sizes among our customers, including well-known companies from the industrial, retail and service sectors. They all benefit from an experienced BI company with flat hierarchies, professional partnership and customer proximity.

What is our goal

Our goal is to provide our customers with a secure, user-friendly information base so that informed and confident decisions can be made.

[30 years of experience in the development of business Intelligence software solutions

Analyze. Plan. Control.

Integrate your data and make knowledge work for you. Gain important insights to make confident and profound decisions.

Governance. Risk. Compliance.

With our holistic risk and opportunity management software, you systematically identify, analyze, assess, monitor and control risks to seize business opportunities.

Individual BI software

We've been implementing BI software solutions for 30 years, helping you make better decisions across your business. Perfectly tailored to your needs and processes.

Software consulting

We offer a comprehensive portfolio of services, ranging from the compilation of your software requirements, implementation and accompanying user training to maintenance after completion of the project.
