

[Software solution for information security management

The importance of information and its protection is now a top priority for companies, not least due to the increasing threat of data theft, hacker and cyber-attacks. An ISMS supports companies in permanently managing, controlling, maintaining and continuously improving information security.

[Information security according to TISAX®

TISAX® is a test procedure for European car manufacturers and suppliers. The aim of this procedure is to define generally applicable security measures for the automotive industry in order to create a uniform information security standard.

Our sophisticated system for information security management antares RiMIS ISMS with the integrated VDA ISA catalogue supports you in preparing for the TISAX® audit. It helps you to methodically implement procedures and rules in your company to ensure the confidentiality, availability and integrity of your data.

[All about information security

Confidentiality

Prevent information from falling into the wrong hands, either accidentally or intentionally, and make it available only to authorised individuals.

Integrity

Ensure that IT systems, IT processes and information remain accurate, non-manipulable, intact and authentic.

Availability

Services and features of an IT system or information and relevant documents are always available at a specific, required point in time.

[Benefit from the features of our solution

- Integrated asset management: Risks can be directly assigned to assets suggested by the system or to those imported by you.
- Risk treatment plan: Appropriate risk treatment measures are suggested in relation to the need for protection.
- Risk policy: The tool can be individually adapted to your company's risk management guidelines.
- Flexibility when importing data: Any databases (e.g. CMDB) can be imported easily.
- Web capability: Any number of people can access the system in a decentralised manner – independent of time and location – and can permanently participate in the process.
- Meaningful reporting: Individual report structure and fast report generation at the touch of a button.
